DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Chi et al USPN 5,587,596.

Chi et al disclose (see figs. 2-73, col. 3, lines 15-67) an image sensor comprising a semiconductor substrate 110 of a first conductivity type; a peripheral circuit formed on a first region of the semiconductor substrate, wherein a ground voltage level (GND source 116) is applied to the first region; a unit pixel array having a plurality of unit pixels 114 formed on a second region of the semiconductor substrate; and wherein the first region is isolated from the second region and wherein a negative voltage level is applied to the second region; it is inherent that the -5V potential (Vbb) is provided by a certain voltage circuit.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2826

4. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Chi et al. in view of Muro USPN 4,877,951.

Chi et al disclose the device structure as recited in the claim, but do not disclose a buried layer surrounding a unit pixel.

Muro discloses in fig. 5 an image sensor comprising a semiconductor substrate; and buried layer 105/115 surrounding unit pixels.

Therefore, it would have been obvious to one skilled in the art at the time the invention was made to incorporate Muro's teachings with the device of Chi et al since that would minimize the effects of noise and/or cross-talk.

Allowable Subject Matter

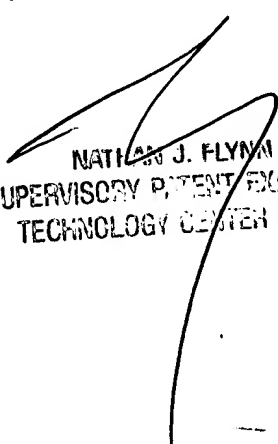

5. Claim 6 is allowed.

6. Claims 3-5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
